

Client Cambridge United Football Club

Nature of client business

Cambridge United FC was founded back in 1912. The club is based at the Abbey Stadium on Newmarket Road, just east of Cambridge City Centre. Their stadium has a capacity of 8,127, made up of terracing and seated areas.

Location: Cambridge, Cambridgeshire

Scope of job

Adcock was contracted by Cambridge United FC to install a new split heat pump system to their staff offices.

What the project entailed

Fujitsu and Adcock worked together to provide a complete service for the client. The Fujitsu split systems were supplied by Fujitsu direct to Cambridge United FC. Adcock then carried out the installation during standard working hours, with minimum disruption.

Timing: November 2015

What we brought to the job

Adcock previously installed a new split system in the IT suite of the club to the customer's satisfaction so we were therefore chosen to install the new office systems.

Adcock Refrigeration and Air Conditioning are also sponsors of The Cambridgeshire FA Girls' Advanced Coaching Centre.

Equipment installed

Fujitsu cassette split systems

Testimonial

Adcock worked in tandem with Fujitsu on this project and provided a very high standard of service throughout the whole job. The work was undertaken during normal office hours and the disruption to our business was minimal. All the staff were extremely polite professional and respectful of the work that we were carrying out, whilst installing the units.

Communication before and during the installation was effective and no issues were experienced by us the client at any time throughout the process. The installation of these units have enabled the working environment within our office to become an environment that is fit for purpose.

Liz Slack, Business Development Manager,
