

## Client Overcourt Ltd for Global House, London

**Nature of client business:** Property Development

**Project Location:** London

### Scope of job

To supply and install Daikin VRV heat recovery systems over 5 floors together with two fresh air handling units to provide heated and cooled incoming air.

### What the project entailed

The client requested an installation with exposed services as this had proved popular with previous installations we had completed.

Each floor had 16 ducted fan coils with twin walled insulated ductwork and acoustic trays beneath the fan coil to prevent noise breakout. All pipework was installed on galvanised tray which required careful planning to provide a symmetric, clean installation. The outdoor units were mounted on the centre first floor level roof with acoustic screening.

**Job Value:** £393,000

**Timing:** 13 weeks

### What we brought to the job

We have enjoyed a 16 year relationship with this client and have completed many projects for them. Our careful planning prior to commencement on site means our installation time is kept to a minimum allowing the client to let the floors ASAP.

### Equipment installed

5 DAIKIN 56KW heat recovery outdoor units

80 Daikin ducted fan coils

2 Air handling units providing 3.2m<sup>2</sup>/sec of air

Full electrical installation
